

In the abstract:

Please replace the abstract with the following replacement abstract:

~~--A bar code scanner with lighting device for illumination is disclosed,~~ The bar code scanner includes a case plate, a housing, a main body and a lighting device. The housing has an opening formed in the front end thereof. The main body has a circuit board, a scanning unit and a scanning window. The main body is accommodated in the housing with the case plate covered thereon. The lighting device electrically connected with the circuit board to provide the illumination for a user to reading read a bar code pattern. Therefore, it is more convenient for the operation of the bar code scanner in an insufficiently lighting environment.—
